

GratEX® Standard M-Clip Installation Guide

GratEX® Standard M-Clip Installation Guide

Safety Precautions

- Eye protection
- Gloves

Suggested Tools

- Battery powered hand drill.
- Impact driver.

How to Install

1. Place grating panel onto the structure.
2. Ensure 2-5mm gap between all panels.
3. Situate appropriate grating clip in the panels, ensuring a minimum of four clips are installed per m². Clips should be flush against the surface of the grating panel.
4. Clips should be approximately 50mm from each edge of the panel, in the direction of the walkway.
5. Internal clips must be installed no more than 600mm apart.
6. Secure the clip to the structure with the bolt, using an impact driver on low setting.
7. Avoid over-tightening the bolt as this can deform the clip and pose as a trip hazard.

Plan Your Work

Before commencing work, you should always review the situation or area into which you intend on installing the clips. This ensures quick and easy installation.
